Portfolio: abdelrahman-cybersecurity.netlify.app

Professional Summary

Computer Science student at Multimedia University (MMU) with a strong interest in Cybersecurity, Ethical Hacking, Network Security, Cloud Security, and Secure Software Development. Experienced in vulnerability assessment, network security implementation, database security, and cybersecurity auditing through academic projects and hands-on laboratory exercises. Skilled in Linux environments, networking technologies, security tools, and software development. Holder of multiple Cisco Networking Academy and IBM SkillsBuild certifications. Seeking Industrial Training opportunities to gain practical experience in cybersecurity and security engineering.

Education

Bachelor of Computer Science (Honours)

Expected 2026

Multimedia University (MMU), Cyberjaya, Malaysia

Technical Skills

Programming Languages: Java, Python, C++, C, JavaScript, SQL

Cybersecurity: Ethical Hacking, Network Security, Vulnerability Assessment, Penetration Testing, Security Auditing, Cryptography, Database Security, Cloud Security, Risk Assessment

Networking: TCP/IP, VLANs, ACLs, VPNs, Routing and Switching, Wireless Security

Operating Systems: Linux, Kali Linux, Windows

Tools: Wireshark, Cisco Packet Tracer, MySQL, Git, GitHub, VS Code

Projects

Enterprise Network Security Audit & Hardening Project

2026

- Conducted a comprehensive enterprise network security assessment using structured threat analysis methodologies.
- Designed a secure network architecture incorporating VLAN segmentation, DMZ deployment, firewall controls, IDS/IPS placement, and site-to-site VPN connectivity.
- Implemented AAA authentication, SSH hardening, ACL security policies, and secure network management configurations.
- Configured VLANs, inter-VLAN routing, wireless security controls, and IPsec VPN connectivity using Cisco Packet Tracer.
- Developed a professional network hardening plan aligned with cybersecurity best practices and defense-in-depth principles.

Database & Cloud Security Project

2026

- Designed secure database access controls and implemented authentication and authorization mechanisms.
- Applied database security principles including user privilege management and data protection strategies.
- Evaluated cloud security risks and implemented security best practices for protecting organizational assets.
- Conducted security assessments and recommended mitigation strategies for securing databases and cloud resources.
- **GitHub:** <https://github.com/amhussien66-png/shopeasy-database-security-assignment>

Network Security & Ethical Hacking Labs

- Performed vulnerability assessments and penetration testing exercises using Kali Linux.
- Conducted reconnaissance, network scanning, service enumeration, and traffic analysis.
- Analyzed network packets using Wireshark to identify security threats and suspicious activities.
- Practiced ethical hacking methodologies and documented security findings with remediation recommendations.

MMU Campus Shuttle Website

- Designed and developed a web-based solution for campus transportation services.
- Improved accessibility of transportation information for students.

Smart Parking Management System (Java)

- Developed a Java-based parking management system using object-oriented programming concepts.
- Implemented parking slot tracking, fee calculation, overtime charging, and multi-level parking management.
- Automated parking operations and availability monitoring.

Seminar Management System

- Developed a web-based Seminar Management System to streamline seminar registration, scheduling, and participant management.
- Implemented user authentication, seminar enrollment, attendance tracking, and information management functionalities.
- Designed and integrated database operations for efficient storage and retrieval of seminar data.
- Applied software engineering principles and database management concepts to develop a scalable solution.
- **GitHub:** <https://github.com/ASHRAF-2004/Seminar-Management-System>

SQL Compiler Using C++

- Built a basic SQL compiler capable of processing SQL-like queries.

- Demonstrated compiler construction concepts and database query processing.
- **GitHub:** <https://github.com/amhussien66-png/light-mariadb-interpreter>

2D Robot Battle Game

- Developed a 2D game featuring AI-based enemy detection and automated combat mechanics.
- Implemented collision detection, health systems, combat logic, and gameplay interactions.
- **GitHub:** <https://github.com/amhussien66-png/unreal-engine-physics-games>

3D Physics-Based Game Development Project

- Developed a 3D game using physics-based movement, gravity, collision handling, and object interaction systems.
- Applied game physics concepts to create realistic gameplay experiences.
- **GitHub:** <https://github.com/amhussien66-png/unreal-engine-physics-games>

Certifications

- Cisco Networking Academy – Ethical Hacker
- Cisco Networking Academy – Cyber Threat Management
- Cisco Networking Academy – Introduction to Modern AI
- IBM SkillsBuild – Cybersecurity Fundamentals
- IBM SkillsBuild – AI Fundamentals: Language and Vision in AI
- Open University – Introduction to Cyber Security: Stay Safe Online
- Open University – Learning from Major Cyber Security Incidents
- ADB Institute – Cybersecurity Course Completion
